Multi Resolution Region Based Image

Multiresolution region-based image fusion using the Contourlet Transform ... spatial and radiometric resolution, etc.). Image fusion techniques have been utilized to benefit the best features of all input images and to provide better application-wise output images. In this paper, a new region-based image fusion technique using the Contourlet Transform (CT) is proposed to produce a fused image ...

This thesis describes a multi-resolution segmentation algorithm which constructs a region pyramid that preserves the color distributions of regions, and then applies a graph cut algorithm at the top level of the pyramid to identify main regions in the image, and finally refines the region boundaries with a top-down approach based on integer linear programming.

A Multi-resolution Model for Histopathology Image ...

Foveated imaging is a digital image processing technique in which the image resolution, or amount of detail, varies across the image according to one or more "fixation points". A fixation point indicates the highest resolution region of the image and corresponds to the center of the eye's retina, the fovea.

This paper presents an overview on image fusion techniques using multiresolution decompositions. The aim is twofold: (i) to reframe the multiresolution-based

fusion methodology into a common formalism and, within this framework, (ii) to develop a new region-based approach which combines aspects of both object and pixel-level fusion.

One effective and pellucid structure used to describe image with multi-resolution is the image pyramid proposed by Burt and Adelson in 1983. The basic principle of this method is to decompose the original image into pieces of sub-images with different spatial resolutions through some mathematical operations.

The tracker relies on gradient-based techniques to provide

efficient estimation of the target location and pose in each frame. The tracking algorithm improves upon similar efficient parametric algorithms by increasing the distance an object can move from frame to frame.
