'Be prepared to be amazed' Guardian
Can anyone get a perfect memory?
Joshua Foer used to be like most of us, forgetting phone numbers and mislaying keys. Then he learnt the art of memory training, and a year later found himself in the finals of the US Memory Championship. He also discovered a truth we often forget: that, even in an age of technology, memory is the key to everything we are. In *Moonwalking with Einstein* he takes us on an astonishing journey through the mind, from ancient 'memory palace' techniques to neuroscience, from the man who can recall nine thousand books to another who constantly forgets who he is. In doing so, Foer shows how we can all

improve our memories. Moonwalking with Einstein by Joshua Foer | Summary & Analysis Preview: *Moonwalking with Einstein* recounts author Joshua Foer's yearlong journey from participant-journalist covering the national memory championships to becoming the 2006 USA World Memory Champion. Other segments offer a journalistic history of the human relationship with memory, addressing its failings, its successes, and its limitations. Most people operate according to a series of misconceptions about human memory. Above all, many believe that they have an average brain and are therefore incapable of performing

mental feats such as swiftly memorizing a deck of playing cards shuffled into random order. This belief, however, is false. Memory champions are no smarter than anyone else and have unremarkable brains from a biological standpoint. The difference is in how memory champions use their brain. They employ techniques and training to overcome shortcomings that are hard-wired into the human brain anatomy. Even those who appear to possess a photographic memory likely do not and are instead employing other memorization techniques... The Art and Science of Remembering Everything *Penguin Press HC*

Citing costly memory-related inconveniences suffered by average individuals, a science journalist chronicles his own struggles with chronic forgetfulness and his life-changing year in memory training, in a guide that shares historical lore and ancient

memory techniques.

The Art Of Memory *Random House*

This unique and brilliant book is a history of human knowledge. Before the invention of printing, a trained memory was of vital importance. Based on a technique of impressing 'places' and 'images' on the mind, the ancient Greeks created an elaborate memory system which in turn was inherited by the Romans and passed into the European tradition, to be revived, in occult form, during the Renaissance. Frances Yates sheds light on Dante's Divine Comedy, the form of the Shakespearian theatre and the history of ancient architecture; The Art of Memory is an invaluable contribution to aesthetics and psychology, and to the history of

philosophy, of science and of literature.

Remember, Remember

Learn the Stuff You Thought You Never Could *Penguin UK*

Kings and queens, British prime ministers, American presidents, countries of Europe... We should all know these things - but like me, you're probably resigned to being the kind of person that just never will. Now Grandmaster of Memory Ed Cooke offers up his memory secrets with a fun, quick and completely unforgettable way to remember the things you thought you never could. But this is no boring Willy, Willy, Harry, Ste. With Ed leading the way on unlikely adventures through people and places, Abraham Lincoln may

become a circle of bra-wearing hams linking arms in your mind, and you may well encounter a fridge wearing Calvin Klein underpants. You could also soon find yourself rattling off the prime ministers to a rapt audience and adding, in a knowing tone, 'ah yes, Marquess of Rockingham, Whig I believe?'. What is for sure is that you'll be bursting with knowledge that will stick in your mind and impress your friends for ever.

Remember It!

The Names of People You Meet, All of Your Passwords, Where You Left Your Keys, and Everything Else You Tend to Forget *Abrams Image*

Throughout his research into memory theory, Nelson Dellis found existing

memory improvement guides to be wanting--overcomplicated, dry, and stodgy. So he decided to write a book that is approachable and fun, centered on what people actually need to remember. In *Remember It!*, Dellis teaches us how to make the most of our memory, using his competition-winning techniques. Presenting the information in a user-friendly way, Dellis offers bite-size chapters, addressing things we wish we could remember but often forget: names, grocery lists, phone numbers, where you left your keys--you name it! This fast-paced, highly illustrated tour of the inner workings of the brain makes improving your memory simple and fun.

Media

Buy now to get the key takeaways from Joshua Foer's *Moonwalking with Einstein: The Art and Science of Remembering Everything*. Sample Key Takeaways: 1) Nowadays, we are relentlessly and endlessly bombarded with new information. There's always much to remember, yet our brains capture so little of that information. Even the stuff that's worth remembering often makes only a short-lived impression on us before disappearing forever. 2) Education has been tainted by the boring tradition of rote learning. Schools today cram huge amounts of information into students' heads without teaching them how to retain it. Memorization has become a mindless way of retaining information just long enough to pass the

next exam.

Joshua Foer's Moonwalking with Einstein

The Art and Science of Remembering Everything - Summary *Createspace Independent Publishing Platform*

This is a summary of Joshua Foer's *Moonwalking with Einstein: The Art and Science Of Remembering Everything*. Foer's unlikely journey from chronically forgetful science journalist to U.S. Memory Champion frames a revelatory exploration of the vast, hidden impact of memory on every aspect of our lives. On average, people squander forty days annually compensating for things they've forgotten. Joshua Foer used to

be one of those people. But after a year of memory training, he found himself in the finals of the U.S. Memory Championship. Even more important, Foer found a vital truth we too often forget: In every way that matters, we are the sum of our memories. Moonwalking with Einstein draws on cutting-edge research, a surprising cultural history of memory, and venerable tricks of the mentalist's trade to transform our understanding of human remembering. Under the tutelage of top "mental athletes," he learns ancient techniques once employed by Cicero to memorize his speeches and by Medieval scholars to memorize entire books. Using methods that have been largely forgotten, Foer discovers that we can all dramatically improve our memories.

Immersing himself obsessively in a quirky subculture of competitive memorizers, Foer learns to apply techniques that call on imagination as much as determination—showing that memorization can be anything but rote. From the PAO system, which converts numbers into lurid images, to the memory palace, in which memories are stored in the rooms of imaginary structures, Foer's experience shows that the World Memory Championships are less a test of memory than of perseverance and creativity. Foer takes his inquiry well beyond the arena of mental athletes—across the country and deep into his own mind. In San Diego, he meets an affable old man with one of the most severe cases of amnesia on record, where he learns that memory is at once

more elusive and more reliable than we might think. In Salt Lake City, he swaps secrets with a savant who claims to have memorized more than nine thousand books. At a high school in the South Bronx, he finds a history teacher using twenty-five-hundred-year-old memory techniques to give his students an edge in the state Regents exam. At a time when electronic devices have all but rendered our individual memories obsolete, Foer's bid to resurrect the forgotten art of remembering becomes an urgent quest. Moonwalking with Einstein brings Joshua Foer to the apex of the U.S. Memory Championship and readers to a profound appreciation of a gift we all possess but that too often slips our minds. Inside of a Dog

What Dogs See, Smell, and Know

Simon and Schuster

As an unabashed dog lover, Alexandra Horowitz is naturally curious about what her dog thinks and what she knows. As a cognitive scientist she is intent on understanding the minds of animals who cannot say what they know or feel. This is a fresh look at the world of dogs -- from the dog's point of view. The book introduces the reader to the science of the dog -- their perceptual and cognitive Abilities -- and uses that introduction to draw a picture of what it might be like to be a dog. It answers questions no other dog book can -- such as: What is a dog's sense of time? Does she miss me? Want friends? Know when she's been bad?

Horowitz's journey, and the insights she uncovered from studying her own dog, Pumpernickel, allowed her to understand her dog better, and appreciate her more through that understanding. The reader will be able to do the same with their own dog. This is not another dog training book. Instead, Inside of a Dog will allow dog owners to look at their pets' behaviour in a different, and revealing light, enabling them to understand their dogs and enjoy their relationship even more.

Proust Was a Neuroscientist

HMH

The New York Times–bestselling author provides an “entertaining” look at how artists enlighten us about the workings of the brain (New York magazine). In this book, the author of *How We Decide* and

Imagine: How Creativity Works “writes skillfully and coherently about both art and science”—and about the connections between the two (Entertainment Weekly). In this technology-driven age, it’s tempting to believe that science can solve every mystery. After all, it’s cured countless diseases and sent humans into space. But as Jonah Lehrer explains, science is not the only path to knowledge. In fact, when it comes to understanding the brain, art got there first. Taking a group of artists—a painter, a poet, a chef, a composer, and a handful of novelists—Lehrer shows how each one discovered an essential truth about the mind that science is only now rediscovering. We learn, for example, how Proust first revealed the fallibility of

memory; how George Eliot discovered the brain’s malleability; how the French chef Escoffier discovered umami (the fifth taste); how Cézanne worked out the subtleties of vision; and how Gertrude Stein exposed the deep structure of language—a full half-century before the work of Noam Chomsky and other linguists. More broadly, Lehrer shows that there’s a cost to reducing everything to atoms and acronyms and genes. Measurement is not the same as understanding, and art knows this better than science does. An ingenious blend of biography, criticism, and first-rate science writing, *Proust Was a Neuroscientist* urges science and art to listen more closely to each other, for willing minds can combine the best of both to brilliant effect. “His book marks

the arrival of an important new thinker . . . Wise and fresh.” —Los Angeles Times

From Dementia to Schizophrenia, How New Discoveries about the Brain Are Revolutionizing Medicine and Science *Simon and Schuster*

Despite everything that has been written about the brain, a potentially critical part of this vital organ has been

overlooked—until now. *The Other Brain* examines the growing importance of glia, which make up approximately 85 percent of the cells in the brain, and the role they play in how the brain functions, malfunctions, and heals itself. Long neglected as little more than cerebral packing material, glia (meaning “glue”) are now known to regulate the flow of information between neurons and to repair the brain and spinal cord after injury and stroke. But scientists are also discovering that diseased and damaged glia play a significant role in psychiatric illnesses such as schizophrenia and depression, and in neurodegenerative diseases such as Parkinson’s and Alzheimer’s. Diseased glia cause brain cancer and multiple sclerosis and are linked to infectious diseases such as HIV

and prion disease (mad cow disease, for example) and to chronic pain. The more we learn about these cells that make up the “other” brain, the more important they seem to be. Written by a neuroscientist who is a leader in glial research, *The Other Brain* gives readers a much more complete understanding of how the brain works and an intriguing look at potentially revolutionary developments in brain science and medicine.

The Life and Afterlife of Harry Houdini *Avid Reader Press / Simon & Schuster*

Joe Posnanski enters the colorful world of Harry Houdini and his legions of devoted fans to explore the illusionist’s impact on global culture—and why his legacy

endures to this day. Nearly a century after Harry Houdini died on Halloween in 1926, he feels as modern and alive as ever. The name Houdini still leaps to mind whenever we witness a daring escape. The baby who frees herself from her crib? Houdini. The dog who vanishes and reappears in the neighbor's garden? Houdini. Every generation produces new disciples of the magician, from household names in magic like David Copperfield and David Blaine to countless other followers whose lives have been transformed by the power of Houdini. In rural Pennsylvania, a thirteen-year-old girl finds the courage to leave a violent home after learning that Houdini ran away to join the circus; she eventually becomes the first female magician to saw a man in half on

television. In Australia, an eight-year-old boy with a learning impediment feels worthless until he sees an old poster of Houdini advertising "Nothing on earth can hold Houdini prisoner," and begins his path to becoming that nation's most popular magician. In California, an actor and Vietnam War veteran finds purpose in his life by uncovering the secrets of his hero. But the unique phenomenon of Houdini was always more than his death-defying stunts or his ability to escape handcuffs and straitjackets. It is also about the power of imagination and self-invention. His incredible transformation from Ehrich Weiss, humble Hungarian immigrant and rabbi's son, into the self-named Harry Houdini has won him a slice of immortality. No one has withstood the test of time quite like

Houdini. Fueled by Posnanski's personal obsession with the magician—and magic itself—*The Life and Afterlife of Harry Houdini* is a poignant odyssey of discovery, blending biography, memoir, and first-person reporting to trace Houdini's metamorphosis into an iconic figure who has inspired millions.

Young Eliot

From St. Louis to The Waste Land

Farrar, Straus and Giroux

A groundbreaking new biography of one of the twentieth century's most important poets. On the fiftieth anniversary of the death of T. S. Eliot, the award-winning biographer Robert Crawford presents us with the first volume of a comprehensive account of this poetic genius. Young Eliot traces the life of the twentieth century's most important poet from his childhood in St. Louis to the publication of his revolutionary poem *The Waste Land*. Crawford provides readers with a new understanding of the foundations of some of the most widely read poems in the English language through his depiction of Eliot's childhood—laced with tragedy and shaped by an idealistic,

bookish family in which knowledge of saints and martyrs was taken for granted—as well as through his exploration of Eliot's marriage to Vivien Haigh-Wood, a woman who believed she loved Eliot "in a way that destroys us both." Quoting extensively from Eliot's poetry and prose as well as drawing on new interviews, archives, and previously undisclosed memoirs, Crawford shows how the poet's background in Missouri, Massachusetts, and Paris made him a lightning rod for modernity. Most impressively, Young Eliot reveals the way he accessed his inner life—his anguishes and his fears—and blended them with his omnivorous reading to create his masterpieces "*The Love Song of J. Alfred Prufrock*" and *The Waste Land*. At last, we experience T. S. Eliot in

all his tender complexity as student and lover, penitent and provocateur, banker and philosopher—but most of all, Young Eliot shows us as an epoch-shaping poet struggling to make art among personal disasters.

Silver, Sword, and Stone

Three Crucibles in the Latin American Story *Simon & Schuster*

Winner, American Library Association Booklist's Top of the List, 2019 Adult Nonfiction Acclaimed writer Marie Arana delivers a cultural history of Latin America and the three driving forces that have shaped the character of the region: exploitation (silver), violence (sword), and religion (stone). "Meticulously researched, [this] book's

greatest strengths are the power of its epic narrative, the beauty of its prose, and its rich portrayals of character...Marvelous" (The Washington Post). Leonor Gonzales lives in a tiny community perched 18,000 feet above sea level in the Andean cordillera of Peru, the highest human habitation on earth. Like her late husband, she works the gold mines much as the Indians were forced to do at the time of the Spanish Conquest. Illiteracy, malnutrition, and disease reign as they did five hundred years ago. And now, just as then, a miner's survival depends on a vast global market whose fluctuations are controlled in faraway places. Carlos Buergos is a Cuban who fought in the civil war in Angola and now lives in a quiet community outside New Orleans.

He was among hundreds of criminals Cuba expelled to the US in 1980. His story echoes the violence that has coursed through the Americas since before Columbus to the crushing savagery of the Spanish Conquest, and from 19th- and 20th-century wars and revolutions to the military crackdowns that convulse Latin America to this day. Xavier Albó is a Jesuit priest from Barcelona who emigrated to Bolivia, where he works among the indigenous people. He considers himself an Indian in head and heart and, for this, is well known in his adopted country. Although his aim is to learn rather than proselytize, he is an inheritor of a checkered past, where priests marched alongside conquistadors, converting the natives to Christianity, often forcibly, in

the effort to win the New World. Ever since, the Catholic Church has played a central role in the political life of Latin America—sometimes for good, sometimes not. In this “timely and excellent volume” (NPR) Marie Arana seamlessly weaves these stories with the history of the past millennium to explain three enduring themes that have defined Latin America since pre-Columbian times: the foreign greed for its mineral riches, an ingrained propensity to violence, and the abiding power of religion. *Silver, Sword, and Stone* combines “learned historical analysis with in-depth reporting and political commentary...[and] an informed and authoritative voice, one that deserves a wide audience” (The New York Times Book Review).

The Year of the Book *Houghton Mifflin Harcourt*

This fully illustrated chapter book follows Anna, a young Asian-American girl, as she navigates relationships with family, friends, and her fourth-grade classroom, and finds a true best friend.

research centers in the fields of genomic medicine and stem cell research At his alma mater, Michigan State University, he endowed a full-time M.B.A. program, and he and his wife have funded a new contemporary art museum on campus to serve the broader region Eli Broad is the founder of two Fortune 500 companies: KB Home and SunAmerica If you're stuck doing what reasonable people do—and not getting anywhere—let Eli Broad show you how to be unreasonable, and see how far your next endeavor can go.

Where Buddhism Meets Neuroscience

Conversations with the Dalai Lama on the Spiritual and Scientific Views of Our Minds *Shambhala Publications*

This book, designed as a conversation between the Dalai Lama and Western neuroscientists, takes readers on a journey through opposing fields of thought--showing that they may not be so opposing after all. Is the mind an ephemeral side effect of the brain's physical processes? Are there forms of consciousness so subtle that science has not yet identified them? How does consciousness happen? Organized by the Mind and Life Institute, this discussion addresses some of the most troublesome questions that have driven

a wedge between Western science and religion. Edited by Zara Houshmand, Robert B. Livingston, and B. Alan Wallace, *Where Buddhism Meets Neuroscience* is the culmination of meetings between the Dalai Lama and a group of eminent neuroscientists and psychiatrists. The Dalai Lama's incisive, open-minded approach both challenges and offers inspiration to Western scientists. This book was previously published under the title *Consciousness at the Crossroads*.

An inside look at Japanese social graces, it answers all the questions of the thoughtful traveler. Extensive, specific information on Japanese

business etiquette assists readers traveling to Japan for business. Lessons From Lucy

The Simple Joys of an Old, Happy Dog *Simon & Schuster*

In this “little gem” (Washington Independent Review of Books), Pulitzer Prize-winning columnist and New York Times bestselling author Dave Barry learns how to age happily from his old but joyful dog, Lucy. As Dave Barry turns seventy—not happily—he realizes that his dog, Lucy, is dealing with old age far better than he is. She has more friends, fewer worries, and way more fun. So Dave decides to figure out how Lucy manages to stay so happy, to see if he can make his own life happier by doing the things she does (except for drinking

from the toilet). He reconnects with old friends and tries to make new ones—which turns out to be a struggle, because Lucy likes people a lot more than he does. And he gets back in touch with two ridiculous but fun groups from his past: the Lawn Rangers, a group of guys who march in parades pushing lawnmowers and twirling brooms (alcohol is involved), and the Rock Bottom Remainders, the world’s oldest and least-talented all-author band. With each new lesson, Dave riffs hilariously on dogs, people, and life in general, while also pondering Deep Questions, such as when it’s okay to lie. (Answer: when scallops are involved.) *Lessons From Lucy* shows readers a new side to Dave Barry that’s “touching and sentimental, but there’s still a laugh on every page”

(The Sacramento Bee). The master humorist has written a witty and affable guide to joyous living at any age.
