The purchase price variance is the difference between the actual price paid to buy an item and its standard price, multiplied by the actual number of units purchased. The formula is:  $(\text{Actual price} - \text{Standard price}) \times \text{Actual quantity} =$

Purchase price variance. A positive variance means that actual costs have increased, and a negative variance means that actual costs have declined.

**Purchase price variance — AccountingTools**

I assume that the purchase price variance was recorded at the time that the raw materials were purchased. If that price variance is significant, it should be reclassified to the following: raw materials inventory, work-in-process inventory, finished goods inventory, and cost of goods sold. The reclassification is also known as prorating the variance or allocating the variance.
