Deep Learning For Event Driven

Deep Reinforcement Learning for Event-Driven Multi-Agent Decision Processes. Abstract: The incorporation of macro-actions (temporally extended actions) into multi-agent decision problems has the potential to address the curse of dimensionality associated with such decision problems. Since macro-actions last for stochastic durations, multiple agents executing decentralized policies in cooperative environments must act asynchronously.

We propose a deep learning method for event- driven stock market prediction. First, events are extracted from news text, and represented as dense vectors, trained using a novel neural tensor net- work. Second, a deep convolutional neural network is used to model both short-term and long-term in- fluences of events on stock price movements.

In EBSN setup, selecting suitable venues for hosting events, which can attract a great turnout, is a key challenge. In this paper, we present a deep learning based venue recommendation system \$DeepVenue\$ which provides context driven venue recommendations for the Meetup event-hosts to host their events. The crux of the proposed model relies on the notion of similarity between multiple Meetup entities such as events, venues, groups, etc.

Building on these results, we demonstrate an event-driven random BP (eRBP) rule that uses an error-modulated synaptic plasticity for learning deep representations. Using a two-compartment Leaky Integrate & Fire (l&F) neuron, the rule requires only one addition and two comparisons for each synaptic weight, making it very suitable for implementation in digital or mixed-signal neuromorphic hardware.

We are looking for a talented and enthusiastic postdoc who will join our team to develop deep learning methods for low-latency object detection and

recognition using novel “event-driven” sensors. The candidates will take an “event-driven” approach to robotics, in which sensor signals are not sampled at a fixed rate, but specialised sensor electronics output only when there is a significant change.

Event-Driven Market Prediction with Deep Learning

Deep learning is a series of models that have the ability to extract deep features from input data with deep neural network architecture. Deep learning models usually have more than three layers. The deep network is typically initialized by unsupervised layer-wise training and then tuned by supervised training with labels that can progressively generate more abstract and high-level features layer by layer [56].
