curved space-time. The four dimensional space-time continuum itself is distorted in the vicinity of any mass, with the amount of distortion depending on the mass and the distance from the mass. Thus, relativity accounts for Newton's inverse square law of gravity through geometry and thereby does away with the need for any mysterious "action at a distance."

Spacetime - Wikipedia

Every set of coordinates, or particular space-time event, in such a universe is described as a "here-now" or a world point. In every inertial reference frame, all physical laws remain unchanged. Einstein's general theory of relativity (1916) again makes use of a four-dimensional space-time, but incorporates gravitational effects. Gravity is no longer thought of as a force, as in the Newtonian system, but as a cause of a "warping" of space-time, an effect described explicitly by a ...
