At its heart, the study of dynamics is the study of motion.

Whether this motion involves automobiles, aircraft or the change of economic indicators, dynamics can be used effectively to gain insight and understanding. We address a range of topics, including dynamical systems theory, vehicle dynamics, bubble dynamics, computer simulation of dynamical systems, vibration and modal analysis, acoustics and acoustic control, and the development of efficient computational methods.

The study of dynamics goes beyond the relationships between the variables of motion as illuminated in kinematics to the cause of motion, which is force. Newton's laws of motion Newton's first law of motion, also called the law on inertia, states that an object continues in its state of rest or of uniform motion unless compelled to change that state by an external force.

Fluid mechanics studies the systems with fluid such as liquid or gas under static and dynamics loads. Fluid mechanics is a branch of continuous mechanics, in which the kinematics and mechanical behavior of materials are modeled as a continuous mass rather than as discrete particles. The relation of fluid mechanics and continuous mechanics has been discussed by Bar-Meir (2008).
