One way to improve heat transfer is to add fins on the outside of the inner tube. This is used to improve the heat transfer of a fluid with a low heat transfer coefficient such as a viscous liquid or a gas, which is passed on the outer side. There are two flow configurations that can be used using a double pipe heat exchanger.

This course will enable you to combine and apply the principles of heat transfer, thermodynamics and fluid mechanics in the design and optimisation of

commercial thermal systems. In addition, the course introduces you to a wide range of challenges and opportunities in waste heat recovery and energy storage, and provides you with practical approaches and solutions to enhance the system efficiency.

Thermal Systems Operation and Design

Thermal design is based on the basic theory of heat transfer and fluid mechanics. Where there's temperature difference, there's heat transfer from high temperature zone to low temperature zone. Heat transfer can be achieved through heat conduction, heat convection and heat radiation.

...

- A variety of high-

intensity heat transfer processes are involved with combustion and chemical reaction in the gasifier unit itself.

- The gas goes through various cleanup and

pipe-delivery processes to get to our stoves. The heat transfer processes involved in these stages are generally less intense.
