Aspect Oriented Programming With AspectJ

In computing, aspect-oriented programming is a programming paradigm that aims to increase modularity by allowing the separation of cross-cutting concerns. It does so by adding additional behavior to existing code without modifying the code itself, instead separately specifying which code is modified via a "pointcut" specification, such as "log all function calls when the function's name begins with 'set'". This allows behaviors that are not central to the business logic to be added to a program

AspectJ is an aspect-oriented programming extension created at PARC for the Java programming language. It is available in Eclipse Foundation open-source projects, both stand-alone and integrated into Eclipse. AspectJ has become a widely used de facto standard for AOP by emphasizing simplicity and usability for end users. It uses Java-like syntax, and included IDE integrations for displaying crosscutting structure since its initial public release in 2001.

This article is a quick and practical introduction to AspectJ. First, we'll show how to enable aspect-oriented programming, and then we'll focus on the difference between compile-time, post-compile, and load-time weaving. Let's start with a short introduction of aspect-oriented programming (AOP) and AspectJ's basics. 2.

Aspect Oriented Programming with Spring 11.1 Introduction Aspect-Oriented Programming (AOP) complements Object-Oriented Programming (OOP) by providing another way of thinking about program structure. The key unit of modularity in OOP is the class, whereas in AOP the unit of modularity is the aspect.

11. Aspect Oriented Programming with Spring

Aspect oriented programming (AOP) as the name suggests uses aspects in programming. It can be defined as the breaking of code into different modules, also known as modularisation, where the aspect is the key unit of modularity. Aspects enable the implementation of crosscutting concerns such as- transaction, logging not central to business logic without cluttering the code core to its functionality.

Aspect Oriented Programming and AOP in Spring Framework ...

The good news is that something like that does exist: aspect-oriented programming (AOP). It separates general code from aspects that cross the boundaries of an object or a layer. For example, the application log isn't tied to any application layer. It applies to the whole program and should be present everywhere.

Aspect-Oriented Programming - Aspect-Oriented Programming ...

Aspect Oriented Programming (AOP) compliments OOPs in the sense that it also provides modularity. But the key unit of modularity is aspect than class. AOP breaks the program logic into distinct parts (called concerns). It is used to increase modularity by cross-cutting concerns. A cross-cutting concern is a concern that can affect the whole application and should be centralized in one location in code as possible, such as transaction management, authentication, logging, security etc.

The AspectJ Project | The Eclipse Foundation

Aspect-oriented programming is a way of modularizing crosscutting concerns much like object-oriented programming is a way of modularizing common concerns. AspectJ is an implementation of aspect-oriented programming for Java. AspectJ adds to Java just one new concept, a join point -- and that's really just a name for an existing Java concept.
