Georgia Land Surveying History and Law *University of Georgia Press*

Georgia Land Surveying History and Law is the first definitive history and analysis of Georgia's land system and the laws that govern it. The book's opening section tells the story of the surveyor's role in transforming Georgia from a frontier to a bounded, populated, and productive colony and state. Paced by anecdotes of surveyors' wilderness experiences, the narrative traces the evolution of Georgia's land subdivision system, beginning with the original, and ultimately impractical, scheme of land granting and rectangular land subdivision under the Trustees of the Georgia Colony. The volume then covers the more flexible but easily abused headright procedure, and the subsequent lottery and succession of systematic, rectangular surveys under which most of the state was laid out and granted in the early nineteenth century. Finally, in lay terms supported by meticulous citation of authority, the volume discusses the legal aspects of land surveying, including the interests that make up land ownership, the transfer of real property, the interpretation of property descriptions, the location of boundaries, riparian and littoral rights, and other topics. The book examines every point concerning boundaries found in any Georgia case or statute. Based solidly on primary sources and the author's fifteen years of experience in land surveying and title abstracting, Georgia Land Surveying History and Law is an exhaustively researched and scholarly reference that will be useful to surveyors, title attorneys, title abstractors, real estate professionals, geographers, cartographers, historians, and genealogists.

Basic GIS Coordinates *CRC Press*

Coordinates are integral building tools for GIS, cartography, surveying and are vital to the many applications we use today such as smart phones, car navigation systems and driverless cars. Basic GIS Coordinates, Third Edition grants readers with a solid understanding of coordinates and coordinate systems and how they operate as well as valuable insight into what causes them to malfunction. This practical and comprehensive guide lays out the foundation of a coordinate system and the implications behind building it as it elaborates on heights, two coordinate systems, and the rectangular system. The previous editions described horizontal and vertical datums such as the North American Datum 1983 (NAD 83) and the North American Vertical Datum 1988 (NAVD 88). Both will be replaced in 2022 or thereabouts. The National Geodetic Survey (NGS) plans to replace NAD83 with a new semi-dynamic terrestrial reference frame for North America and a new vertical datum will replace NAVD88. The foundation of the new vertical datum will be a temporally tracked gravimetric geoid. The interim period is intended to smooth the transition to the new paradigm and this new edition explores the changes and provides assistance in understanding them.

Surveying for Archaeologists and Other Fieldworkers *Routledge*

Although the preparation of plans is an essential part of the work of a field archaeologist or excavator, many University Departments of Archaeology give very little attention to surveying, regarding it as a subject which should either be left to technicians or picked up during work in the field. As a result, some archaeologists do not even realise that their survey techniques are unsatisfactory. Others, driven by the requirements of their work, devise idiosyncratic methods which are inherently liable to inaccuracy and unnecessarily laborious. The object of this book is to enable archaeologists, even without relevant training, to deal with any problem in surveying. The book is arranged by technique for ease of reference. Thus one part is devoted to Chain Surveying, which has evolved over centuries into the simplest and quickest way of making accurate plans for most types of site; but methods of reconnaissance and of rough survey are also described. Since instrumental work is sometimes necessary, details are given of the construction and use of the Level and of the Theodolite and Tacheometer. Simple but accurate methods those not requiring a computer are described for plotting from oblique aerial photographs, and although numerical calculations are seldom needed in archaeological surveys, there are occasions when they can save considerable time and labour, so fully worked examples are given of all relevant calculations, with alternatives according to whether logarithms or an electronic calculator are available."

Elementary Surveying *Baltzell Press*

ELEMENTARY SURVEYING by ARTHUR LOVAT HIGGINS. PREFACE: Now that Elementary Surveying is regarded as something more than a mere adjunct to mathematics and geography, it appeared to the writer that there might be a place for a little book which aims at opening a vista of the educational and professional possibilities of the subject, presenting it as the application of a few general

geometrical principles rather than something akin to a handicraft with each operation an entity. It is hoped this book will stimulate enthusiasm among those who contemplate entering one of the professions implied in the Introduction or, otherwise, create an interest in the other man's job. The text is based largely upon the syllabus in Elementary Surveying in the General School Examination of the University of London, and matter outside this curriculum is indicated with an asterisk, suggesting the introduction to an intermediate course in the subject. Also many of the questions are taken from papers set by the writer in this particular examination and he takes this opportunity of expressing his indebtedness to the Senate of that University for their courtesy in permitting him to reproduce this material. In addition to the theoretical exercises, a number of field exercises are added, and these no doubt will suggest lines upon which others can be devised in keeping with what may be conveniently styled local conditions. These examples are short, and anticipate the adoption of parties of three or four at most pupils, this organisation, in the writer's opinion, being the only rational way of handling the subject. Parts of larger surveys or schemes can be allocated to these parties, who retain their identity as far as is practicable. Prior to going into the field the routine should be outlined so as to reduce supervision to a minimum, and, better still, to leave the parties to their own devices. The writer takes this opportunity of expressing his indebtedness to Mr. A. N. Utting, of the Cambridge University Engineering Laboratory, for preparing the drawings from which the figures are reproduced, also his thanks to Mr. S. G. Soal, M. A., of Queen Mary College, for his kindness in reading the proofs. In conclusion the writer acknowledges the agency of his wife, whose influence really led him to undertake this short but pleasant enterprise.
