Optimization Of Fuel Consumption In gas, which results in an important fuel-consumption cost. Therefore, optimization of fuel consumption plays an important role in the op-erating costs of the stations. The difficulties of such optimization problems arise from several

Each component f_{ij} is given by the product of the power for the middle of the interval, pc_j , and the estimated specific fuel consumption for that interval, $\hat{f}_{ij}$, i.e. $f_{ij} = \hat{f}_{ij}pc_j$ A binary optimization problem can now be defined as minimize CT_x subject to $Aonx = Bon Apowx \hat{a}\% \neq Bpow$ (13) 3.1 Cost for Engine Start The binary optimization as formulated above does not penalize start of engines.

According to the report of World Shipping Council in 2008, fuel

cost represents as much as 50–60% of total ship operating cost. Since fuel consumption is known to be the third power function of ship speed, many global shipping companies are trying to reduce fuel consumption by slowing down ship speed (called slow steaming). In this study, we consider the ship speed optimization problem with the objective of minimizing total fuel consumption of a (tramp or liner) ship operated on a given ...
