Prediction Of Polymer Properties 2nd

This practical Second Edition of an incomparable resource extends its presentation of a revolutionary breakthrough in the methodology of predicting polymer properties through quantitative structure-property relationships and continues to demonstrate in a simple, straightforward manner how this methodology can be applied to a much wider variety of polymer types than was previously possible.

Prediction of Polymer Properties 2nd Rev Edition - amazon.com

"The third edition of this book which has been much revised and expanded, provides an excellent description of the latest breakthroughs in the methodology of prediction of the key physical and chemical properties of polymers ... and will be of great value in the design of 'new' polymeric materials." - Polym Int, 54, 2005

Prediction of Polymer Properties - 3rd Edition - Jozef ...

A second group of polymers consists of properties that are

important at very high electric field strengths, such as electric discharge, dielectric breakdown, and arc resistance. They may be regarded as the ultimate electrical properties.

Properties of Polymers: Their Correlation with Chemical Structure; Their Numerical Estimation and Prediction from Additive Group Contributions summarizes the latest developments regarding polymers, their properties in relation to chemical structure, and methods for estimating and predicting numerical properties from chemical structure.

Properties of Polymers - 3rd Edition

Properties of Polymers, Fourth Edition incorporates the latest developments in the field while maintaining the core objectives of previous editions: to correlate properties with chemical structure and to describe methods that permit the estimation and prediction of numerical properties from chemical structure, i.e. nearly all properties of the solid, liquid, and dissolved states of polymers.

Since the same force model is used in the

simulation and theory, this comparison is a strong test of the assumptions made in deriving the theory. Results are presented for pure polymers of up to 50 segments long, polymer solutions of a polymer 20 segments long dissolved in its own monomer, and blends of polymers of 25 segments each.
