### FINAL VERDICT

---

After reviewing and assessing Test Patte Noire from cover to cover, we have come to our final decision.

## The Pros

One of the major highlights of this publication *Test Patte Noire* is its one-of-a-kind narration design which keeps the readers involved throughout guide. Additionally, the well-developed characters make the book much more relatable and satisfying to read. Additionally, the story twists keep the viewers on their toes, making the book unforeseeable and amazing.

## The Cons

Nonetheless, there were some elements that we located lacking. The pacing of *Test Patte Noire* was slow sometimes, that made it really feel dragged out.

Additionally, there were some loose ends that were not locked up by the end of the book, which left us with unanswered concerns.

## Final Ideas

Generally, our company believe that *Test Patte Noire* is worth a read, despite some small flaws. The special storytelling design, relatable personalities, and story twists make it a worthwhile enhancement to your shelf. So, if you're looking for an exciting read, *Test Patte Noire* is most definitely worth thinking about.

In Grade 10 we are only looking at the system of 2 equations. We are learning how to solve a system of linear

equations in three ways: graphically, by substitution and by elimination. To solve the system of linear equations with two unknowns means to determine the values of the unknowns, that satisfy BOTH linear equations in the system or show that the solution does not exist.

Purplemath "Linear" equations are equations with just a plain old variable like "x", rather than something more complicated like  $x^2$ , or  $x/y$ , or square roots, or other more-complicated expressions. Linear equations are the simplest equations that you'll deal with. You've probably already solved linear equations; you just didn't know it.

Every linear equation can be solved in the same way as in the above examples. In fact, let us consider the general linear equation  $ax+b=0$  Add  $-b$  to both sides to obtain  $ax=-b$  Multiply both sides by  $1/a$  to obtain  $x=-(b/a)$  if  $a \neq 0$ . The general linear equation, therefore, has as its solution set  $\{b/a\}$ , if  $a \neq 0$ . Thus each

linear equation has at most one solution.

The following figure shows how coefficients, variables, terms, and expressions all come together to make equations. In the equation  $2x - 32 = 10x$ ,  $2x - 32 = 10x$ , the variable is  $x$ .

### Solving Linear Equations

Example: Solve  $(2x - 10)/2 = 3(x - 1)$   
 Step 1: Clear the fraction.  $x - 5 = 3(x - 1)$   
 Step 2: Simplify Both sides equations  $2x - 5 = 3x - 3$ .  $x = 3x + 2$ .  $x - 3x = 2$ .  
 Step 3: Isolate  $x$ - $2x = 2$   $x = -1$ . Solution

of Linear Equations in Two Variables. To solve Linear Equations having 2 variables, there are different methods. Following are some of them:

### **Linear Equations (Definition, Solutions, Formulas & Examples)**

Example 16.1. Examples of linear equations:  $(x-4=6)$  is a linear equation.  $(5x-6=4x+2)$  is a linear equation.  $(x^2-2x+1=0)$  is not a linear equation, since the variable  $(x)$  is to the second power. This is a quadratic equation which we will study in chapter 20.
