The processes are mutation, which introduces new alleles into the population; selection, which occurs when genotypes have different reproductive success; migration, the movement of new individuals into or out of the population; and genetic drift, the random change in allele frequencies due to chance.

Evolution exam questions

The foundation of evolution is not just working DNA but changing DNA. The primary mechanism of significant change in DNA is a mutation. That DNA is subject to mutation is a fact, and it has been directly observed. Also, many of the mechanisms of mutation are understood including mutations that can lead to drastic changes in an organism.
