Einstein's general theory of relativity stated that a strong gravitational field, such as the gravitational field of the sun, could bend beams of light. Newton's classical physics assumed that light traveled in straight lines. The general theory dealt with the new theory of gravitation. Einstein's prediction proved correct.

Classical relativity (defined initially by Galileo Galilei and refined by Sir Isaac Newton) involves a simple transformation between a moving object and an observer in another inertial frame of reference.

Einstein's Theory of Relativity

The problems with classical physics led to the development of Quantum Mechanics and Special Relativity. Some of the problems leading to the development of Quantum Mechanics are listed here. Black Body Radiation: Classical physics predicted that hot objects would instantly radiate away all their heat into electromagnetic waves. The calculation, which was based on Maxwell's equations and Statistical Mechanics, showed that the radiation rate went to infinity as the EM wavelength went to zero
